Date: 25 October 2011

qr5 2012 turbine set to change the landscape of small wind

quietrevolution, a leading UK manufacturer of small wind turbines and the fourth fastest growing cleantech company in Europe, has announced the launch of its improved qr5 at RenewableUK 2011 in Manchester.

The next generation turbine promises a range of improvements on its predecessor, making it the best in its class as a vertical axis wind turbine (VAWT).

The engineers at quietrevolution have doubled the energy output performance of the first generation model by using more efficient aerodynamics and designing a new bespoke generator. The technology is set to increase return of investment for buyers, at a time when energy costs and demands are increasing throughout the UK.

The launch comes as Peter Ward, former Chairman and Chief Executive of Rolls-Royce and Bentley Motor Cars, has been appointed as the new Executive Chairman of quietrevolution. He brings with him a wealth of experience, also holding the current title of Chairman for Bowman Power Ltd.

Peter Ward, Executive Chairman of quietrevolution, said: "The improved qr5 2012 is a great sign of the company's growth. I'm immensely proud that our site in Wales is advancing skills in design as well as manufacturing, and is now providing renewable solutions all over the world. Our engineers have worked hard to create a turbine that will be industry leading and recognised as a viable investment option for the energy market."

Having filled manufacturing capacity for 2011, Peter aims to increase production at their headquarters in Pembroke Dock, Wales, to fulfill demand for scheduled micro-wind farms.

Just over 100 new qr5 2012s have already been ordered from national installer, Sitec Infrastructure Ltd. These turbines will form part of quietrevolution's mission, with funding from Hazel Capital, to develop micro wind-farms that can be installed in locations such as: car parks, industrial parks, alongside access tracks, farm estates or even seaside promenades.

About quietrevolution™

quietrevolution is a UK based wind turbine manufacturer. The company was started in September 2006 and has turbines installed in the UK, Australia, the Netherlands and Germany.

With energy prices on the rise, there is a need to focus on renewable technologies. quietrevolution's aim is to play a leading global role in the local energy revolution by designing, manufacturing and promoting small-scale wind turbine solutions and the role they play in helping combat climate change. The elegant design of quietrevolution's qr5 turbine is geared towards adding visual appeal to its surroundings, and the aerodynamics of the vertical axis design mean that noise and vibration is unobtrusive.
