Green Storage: Brentford Space Station Self Storage facilities install quietrevolution qr5 turbine

quietrevolution, a leading UK manufacturer of vertical axis wind turbines and the fourth fastest growing cleantech company in Europe, has completed installation of the qr5 turbine at the site next to the M4 in Brentford. The installation was carried out by Sitec.

The company, which earlier this year closed a £5 million project finance deal with Hazel Capital for the deployment of its innovative turbine for micro wind-farms, has been expanding its distributed generation model in the UK and across the globe.

quietrevolution's turbine is recognised for its low noise and vibration output and its active control system with integral remote monitoring. The qr5 is especially suited for generating power on-site and has a compact rotor design of only 5x3 metres, which allows it to be easily installed either on buildings or as a stand-alone turbine. Manufactured in Wales, the qr5 has a strong visual aesthetic and delivers improved performance in turbulent and gusty conditions.

Jose Carlos Damas, Sales & Marketing Director of quietrevolution, said: "Our installation represents another big step in our growth and is a clear indication of the mounting demand for distributed generation. We worked closely with the local community in our installation process and it's great to know that this will provide renewable, clean energy to the storage company for all on the M4 to see.

“We have a wide choice of sites,” he said. “While companies with conventional turbines might avoid high levels of turbulence, our vertical axis wind turbines thrive on gusty conditions.”

Christopher Evans, Director of Sitec said, “This is a great site for the qr5 turbine as it can be seen by all the M4 traffic.”

quietrevolution was recently named one of the fastest growing cleantech companies in Europe, winning fourth place in the Cleantech Connect League Table Awards 2010.

About quietrevolution™

quietrevolution is a UK based wind turbine manufacturer. The company was started in September 2006 and has turbines installed in the UK, Australia, the Netherlands and Germany.

With energy prices on the rise, there is a need to focus on renewable technologies. quietrevolution's aim is to play a leading global role in the local energy revolution by designing, manufacturing and promoting small-scale wind turbine solutions and the role they play in helping combat climate change. The elegant design of quietrevolution's qr5 turbine is geared towards adding visual appeal to its surroundings, and the aerodynamics of the vertical axis design mean that noise and vibration is unobtrusive. Please visit www.quietrevolution.com for more information.
